

GaugeFlow-base generative closure: $p(B, N, C, A, L, F)$

Carrier + count

$$p(B, N)$$

sample both; never use
test-set truth

Composition

$$p(C | N)$$

unordered multiset;
exact atom count

Site assignment

$$p(A | C, B)$$

count-exact; parent-action
quotient

Lattice

$$p(L | A, C, N, B)$$

positive volume;
periodic chart

Coordinates

$$p(F | A, L, N, B)$$

wrapped translation
quotient
